## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 11-14 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article.21(2) of such treaty in the English language.

Claims 11 and 13-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Ogusu (2005/0169641).

With respect to claims 11 and 13, Ogusu shows in Fig.3 a method of enhancing the modulation bandwidth of a laser, the DFB laser 21a having a operating frequency and having an output and an input, the method comprising the steps of:

- (a) tapping 40 the output from the laser to thereby define a tapped optical signal;
- (b) shifting the frequency (modulator 42 and as pointed out in Fig.1 and para.0016 of this instant application, the modulator 16 is used to shift the laser frequency. Hence, the Ogusu modulator 42 is also used to shift the laser frequency) of the tapped optical signal to thereby define a shifted optical signal;

Art Unit: 2828

(c) feeding the shifted optical signal back into the input of the laser (from optical branch circuit to DFB laser 21a).

With respect to claim 14, Ogusu teaches the Mach-Zehnder modulator (para.0076).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ogusu (2005/0169641) in view of Ih (4768852).

Ogusu discloses all limitations of the claims except for the Surface Acoustic Wave (SAW).

Ih teaches a SAW (col.1, line 36).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Ogusu what is taught by Ih to employ an alternative modulator (col.1, line 36).

Art Unit: 2828

***Allowable Subject Matter***

Claims 15-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-10 and 19-34 are allowed.

Claims 1, 19, 23, and 30 are allowed over the Ogusu, Mossberg et al., Brenner et al., and Ih prior art because they fail to teach, taken singly or combined, the limitations of a modulator for generating two sidebands and a filter coupled to an output of the modulator for suppressing or passing on of the two sidebands, and an optical path coupling an output of the filter to the laser for injection locking.
